

The SYSPRO® Enhancements Series

The Advanced Planner module is seamlessly integrated into SYSPRO version 6.1. It is designed to reduce costs and streamline business processes.

It utilizes the SYSPRO advanced technology that empowers end-users to customize the interface and add functionality without requiring programming.

“We had a specific need for seeing the material status of a project and when each item would be coming in and from whom. We were in a tight spot, not really knowing where and when each piece would come together. The Sutton Software team listened to what we needed and came back with the Advanced Planner. They worked diligently to incorporate all the levels and possibilities we needed in this very complex task.

Sutton’s staff adapted all the bells and whistles we asked for and stuck with us through the process.

We have found Sutton Software to be a quality and driven partner. They are one of the rare supply partners that fit “our partner profile.”

Director of Materials

ADVANCED PLANNER

- Provides results for the specific request that only uses actual demand—no need to separate actual demand from projected demand
- Pegged MRP-type reporting in a MTO/ETO environment without running the MRP module
- Improves SYSPRO’s Trial Kitting by providing the additional data of on-order detail, quantity, order number, and due dates for orders
- Increases manager productivity without additional staff
- Provides a faster response when committing to customer ship dates
- Saves user’s time by displaying complete information required for each order
- Creates standard SYSPRO or SRS reports, on screen and color-coded
- Ensures complete common parts Reports (consolidated or not, based on user preference)
- Reduces planning time with “Exceptions Only” Report, allowing planners to quickly analyze problems

Take control of your planning—order the Advanced Planner module today!

Stock Code Planner Options:

The program will include all levels of the BOM

User enters the "include Sales order demand Through date"

Allows users to enter stock codes for which they need information

Users have numerous options to customize the results for their exact needs
